

Powerful Address Verification for U.S. and Canadian Addresses

StreetPerfect.NET

StreetPerfect.NET is a powerful bilingual web service, providing cost effective address verification for both U.S. and Canadian addresses. Developed by Envision IT, and based upon Sun Media Corp's StreetPerfect software toolkit, StreetPerfect.NET delivers real-time address look-up, verification, validation and correction capabilities that call on the U.S. Postal Service and Canada Post databases.

StreetPerfect.NET is suitable for any business that wants to maintain an accurate up-to-date database of its client information. This is an invaluable application for businesses such as call centers that need real-time address verifications, eCommerce and Customer Self Service websites. StreetPerfect.NET can also provide businesses that engage in direct mail marketing campaigns a tool to update existing databases or provide the basis for new postal code specific databases.

- **Correct Address:** Checks against a current database of valid addresses to verify that the street address, zip / postal code and city represent a real location.
- **Suggest Address:** Rapidly collects accurate information with minimal data entry. Valid address ranges described by the entry of a zip or postal code are returned and can easily be used to populate forms.
