

# Mastering the SharePoint Site Definition Provisioning Framework and Other Techniques for Deploying Large Hierarchies of SharePoint Web Sites

---

Hierarchies of SharePoint Web Sites  
Techniques for Deploying Large

SPDEV335

*Michael Herman*

*Solution Architect, Envision IT*

Clarity  
Direction.  
Confidence.

## About ME...

# Abstract

- ▶ Are there times when you'd like SharePoint to create an entire hierarchy of web sites instead of a single web site?
  - Would you like to make this an easily repeatable process?
- ▶ The SharePoint Site Definition Provisioning Framework is an in-the-box SharePoint capability that makes it easy to implement this without writing custom code.
- ▶ Other approaches and their trade-offs are also discussed. A case study is included.

# Problem Statement

- ▶ Provision (create) large hierarchy of web sites
  - Each uses the same (or a different) web site template
  - Hierarchy deep enough (> 2-3 levels)
  - Hierarchy wide enough (> 4-5 child web sites)
  - Need to recreate the hierarchy few to many times
- ▶ Examples
  - Gov't: Division, Department, Branch, Team sites
  - Curriculum: Year, Module, Session, Topic

# Case Study: Sample Hierarchy

<a href="#">View All Site Content</a>	<a href="#">MyNOSM Home</a> > <a href="#">Organization</a> > <a href="#">Community Engagement</a>
<b>Administration</b>	
<b>Community Engagement</b>	
<ul style="list-style-type: none"><li>▪ <a href="#">Aboriginal Affairs</a></li><li>▪ <a href="#">Admissions</a></li><li>▪ <a href="#">Clinical Placements and Accomodations</a></li><li>▪ <a href="#">Community Engagement</a></li><li>▪ <a href="#">Electives</a></li><li>▪ <a href="#">Franophone Affairs</a></li><li>▪ <a href="#">Vice Dean-Professional Activities</a></li></ul>	
<b>Continuing Health Professional Education</b>	
<b>Dean's Office</b>	
<b>Faculty Affairs</b>	
<b>Informatics</b>	
<b>Learner Affairs</b>	
<b>Postgraduate Education</b>	
<b>Research</b>	
<b>Undergradudate Medical Education</b>	

# Assumptions

- ▶ Farm and Web Applications
  - Existing (Previously Created)
  - Best Practice: 100% Scripted Install
    - SharePoint Configuration Wizard (psconfig.exe)
    - Creation of Farm (psconfig.exe, stsadm.exe)
    - Creation of Web Applications (stsadm.exe)
    - See Ben Curry's Blog (<http://blogs.mindsharp.com>)

# Best Practices: Options

- ▶ Completely ITB
  - In the Box: Manual or Scripted
- ▶ Custom (OTB)
  - Out of the Box: Site Model XML Console App
- ▶ Hybrid
  - ITB Provisioning Provider
    - Custom Web Template Provisioning XML File
  - OTB Custom Provisioning Provider
- ▶ Best Practice(s)? It will depend...

# Completely ITB

- ▶ Manually
  - Tedious/Error Prone, Lots of Effort
- ▶ Scripting
  - Stsadm.exe
  - PowerShell

# Custom (OTB)

- ▶ Custom Console Application
  - XML Site Model -> Console App -> SharePoint OM

# Hybrid

- ▶ Custom Web Site Provisioning Provider
- ▶ Options to Consider
  - XML Site Model -> Provider -> SharePoint OM
  - Call PowerShell (XML Site Model) -> SharePoint OM

# Custom Provisioning Providers

## ▶ Sample Site Model XML File

```
<rootWeb>
  <webs>
    <web url="Wiki" siteDefinition="WIKI#0" displayName="Our Wiki"
description="Our teams wiki allows us to brainstorm online." />
    <web url="Blog" siteDefinition="BLOG#0" displayName="Our Blog"
description="Our department's blog shows key updated information about our
department." />
    <web url="Search" siteDefinition="SRCHCENTERLITE#0"
displayName="Search" description="We need to be able to search don't we" />
  </webs>
</rootWeb>
```

# Custom Provisioning Providers

```
public class WebProvisionProvider: SPWebProvisioningProvider
{
    public override void Provision(SPWebProvisioningProperties
    props)
    {
        SPWeb rweb = props.Web;
        string data = props.Data;
        // Write code to provision lists, documents, sub webs, etc.
        // that are necessary for this web template.
    }
}
```

# Custom Provisioning Providers

```
<Configuration ID="100"  
  Title="My Site Template" Description="My Site Template"  
  ImageUrl="/_layouts/images/stsprev.png"  
  Hidden="FALSE"  
  DisplayCategory="Publishing"  
  ProvisionAssembly="MyAssembly, Version=1.0.0.0,  
  Culture=neutral, PublicKeyToken=11df43608d33992f"  
  ProvisionClass="MyAssembly.WebProvisionProvider"  
  ProvisionData=""  
>
```

# Custom Provisioning Provider Blogs

  - <http://consulting.ascentium.com/blog/sp/Post59.aspx>
- ▶ Customizing SharePoint Site Creation
  - <http://www.sharepointbriefing.com/features/article.php/3792601/Customizing-SharePoint-Site-Creation.htm>
- ▶ How to build a custom site definition which has child sites (webs)
  - <http://blogs.msdn.com/modonovan/archive/2008/09/11/how-to-build-a-custom-site-definition-which-has-child-sites-webs.aspx>

# Site Model Visual Designers?

- ▶ No purpose built solutions (that I know of)
- ▶ MS Visio
  - Possible
- ▶ Mindjet MindManager
  - Better
- ▶ MS Workflow Foundation 3.0 Design Control
  - Didn't scale well

# Best Practices Summary

- ▶ Depends on Requirements
  - Repeatability of Build Process
  - Command Line vs. Data-Driven
    - Easier to parse, process and save XML files (vs. command line files)
- ▶ Depends on Available Skill Sets (or Tools)
- ▶ Ability to Leverage Costs across Multiple Projects

# Best Practices Summary

## ▶ Simple to More Complex

- Browser-based Configuration
- Command line (“batch”) files using stsadm.exe
- PowerShell command files
- ITB Portal Provisioning Provider – “no code”
- OTB Site Model XML Console App
- Custom Portal Provisioning Provider
  - Custom Site Model Input File Format (XML)
  - Site Model Visual Designer
