- Easy delegation of user management to business
- Self-registration, approvals, forgotten password reset
- Simplified login for both internal and external users

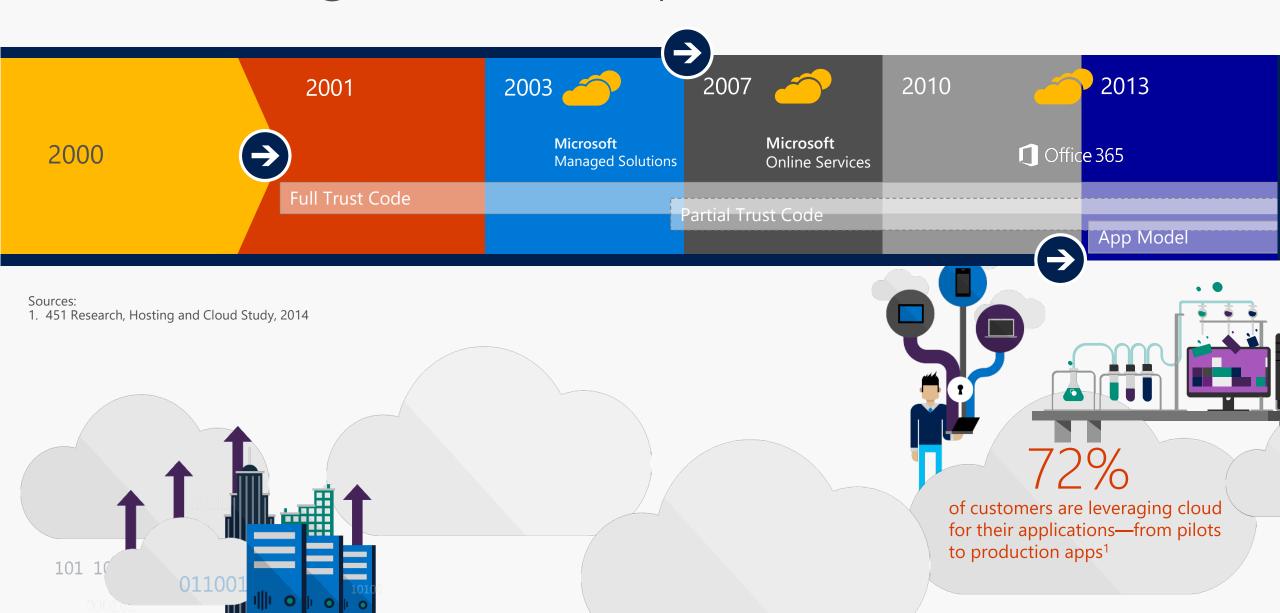

SharePoint Development Background

Accelerating web development

Full Trust Solutions

- Code runs on the SharePoint server
- Access to the full server API
- Code can run in with elevated permissions
- Not supported on Office 365
- Can raise challenges when upgrading SharePoint

- Code is uploaded into SharePoint
- Runs in a restricted sandbox
- Limited set of API methods available
- Supported on premises and in Office 365
- Deprecated by Microsoft and not recommended

- Client side code runs in the browser
- Uses CSOM or REST APIs to communicate with SharePoint
- User needs permissions for anything that is being done
 - No ability to run with elevated permissions

Apps Model – Provider Hosted

- Apps run in a separate server or IIS site from SharePoint
- Gets code off the SharePoint server
- Supports on premises and Office 365
- UI runs in an iFrame in the SharePoint window

- Setting up the App store is complicated
- Separate wildcard app domain is needed
- Certificates
- Complex to move between environments dev, test, prod
- Apps intended to be added to sites by end users

Why are Apps Complex?

- Intended for functions that will be added multiple times to sites
- End users can discover Apps in the public store or company store
- Reality is most business apps don't require this
- Custom Apps typically need to exist in one or a few places

Alternative App Models

Checklist for an Ideal App Model

- No iFrames
- No wildcard DNS domains
- No code on the SharePoint Server
- Great user experience
- Standard development model
- Ability to run with elevated permissions
- Integrate with more than just SharePoint

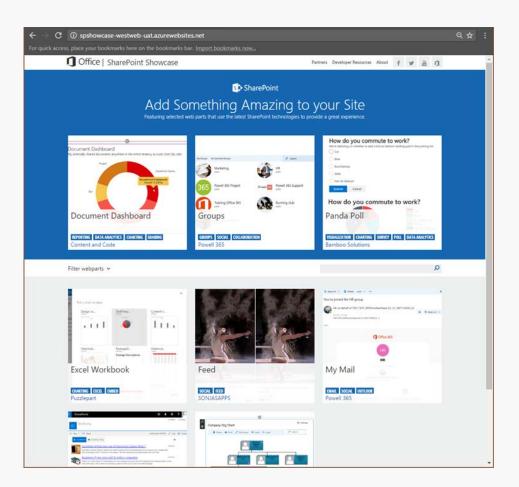

The SharePoint Framework

Why did we need SPFx? New Tech? Another thing?

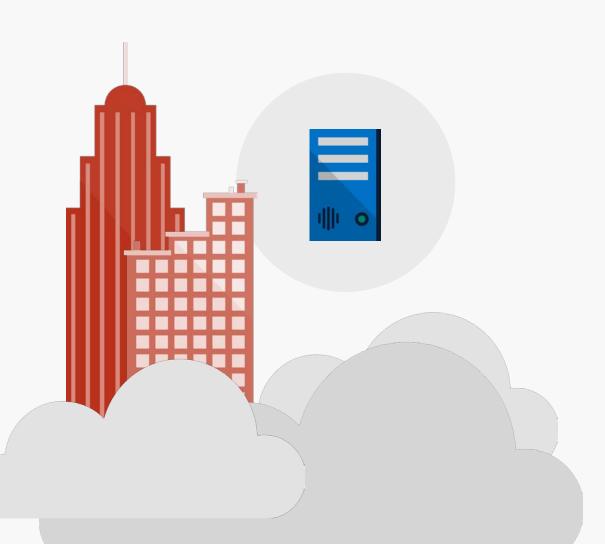

- We saw what developers where doing in SharePoint
- We knew we needed to refresh the UI
- Responsive Design is now expected
- iFrame ... love it or hate it

SharePoint extensibility principles Build long-term, value-added services

Principles

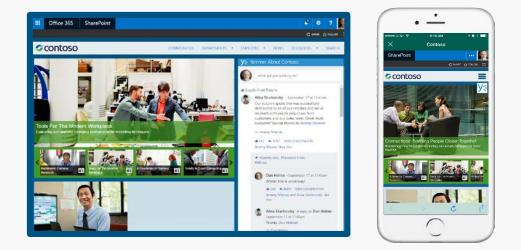

- Modern client-side development
- Lightweight web and mobile
- Powers our own experiences
- Backward compatible
- Supports open source tools and JavaScript web frameworks

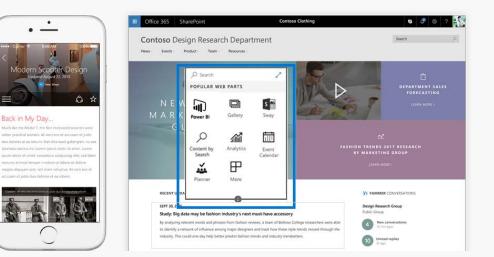

Scenarios

• Building custom Web Parts

- Building vertical focused applications
- Integrating with external systems
- Enhancing the out of the box experience
 - Branding custom portals
 - Building custom Intranet Portals

Supporting Frameworks

nøde	Node.js [®] is a JavaScript runtime	https://nodejs.org
	Node.js' package ecosystem, npm, is the largest ecosystem of open source libraries in the world	https://www.npmjs.com/
YEOMAN	The web's scaffolding tool for modern webapps Used to generate webpart projects	http://yeoman.io/
Gulp	JavaScript task runner to automate build tasks	http://gulpjs.com/
TypeScript	Typed superset of JavaScript that compiles to plain JavaScript. Any browser. Any host. Any OS. Open source.	https://www.typescriptlang.org/

Additional Frameworks

React	Open source JavaScript library created by Facebook for building user interfaces	https://facebook.github.io/react/
Bootstrap	Bootstrap is the most popular HTML, CSS, and JS framework for developing responsive, mobile first projects on the web	http://getbootstrap.com/
{less}	Less is a CSS pre-processor. It extends the CSS language, adding features to make it more maintainable, themeable and extendable	http://lesscss.org/
⊌ jQuerγ	Write less, do more. jQuery is a fast, small, and feature-rich JavaScript library	https://jquery.com/
handlebars	Handlebars is a templating engine to convert datasets into HTML	http://handlebarsjs.com/

Additional Frameworks

<u>Knockout</u> .	Simplified dynamic JavaScript UIs with the Model-View-View Model (MVVM)	http://knockoutjs.com/
NGULARJS by Google	Single page apps built with the Model-View- Controller (MVC)	https://angularjs.org/
Visual Studio	Visual Studio WebAPIs	http://www.asp.net/web-api
{···} swagger	Swagger is to REST as WSDL is to SOAP Define your API in Swagger	http://swagger.io/
	Adds Swagger to a .NET WebAPI project	https://www.nuget.org/packages/ Swashbuckle

Getting Started with SharePoint Framework

- https://github.com/SharePoint/sp-dev-docs/wiki
- Setup your Office 365 Developer Tenant
- Setup your Machine
- Go build your first web part

Set up your Office 365 developer tenant

- 1. Sign up for an Office 365 Developer Tenant
- 2. Create app catalog site
- 3. Create a new Developer Site collection
- 4. Set up a document library
- 5. Upload the SharePoint workbench

Setup Your Machine

1. Install NodeJS

- <u>https://nodejs.org/en/</u> (install the LTS version)
- 2. Install Yeoman and gulp
 - npm i -g yo gulp
- 3. Install Yeoman SharePoint generator
 - npm i -g @microsoft/generator-sharepoint

Build a Hello World Web Part

- 1. Create a new web part project
 - yo @microsoft/sharepoint
- 2. Preview the web part
 - gulp serve
- 3. Run in the SharePoint Workbench
- 4. Preview the web part in SharePoint

Run with Elevated Permissions?

- Do users have rights to do everything they need to do in SharePoint?
- Read, add, and edit rights to SharePoint
- Column level security
- Custom business rules

Client-Side Code Only

- Presentation of read-only data
 - Catalog publishing
 - Visualizations
 - Customized user experience
 - Simple forms

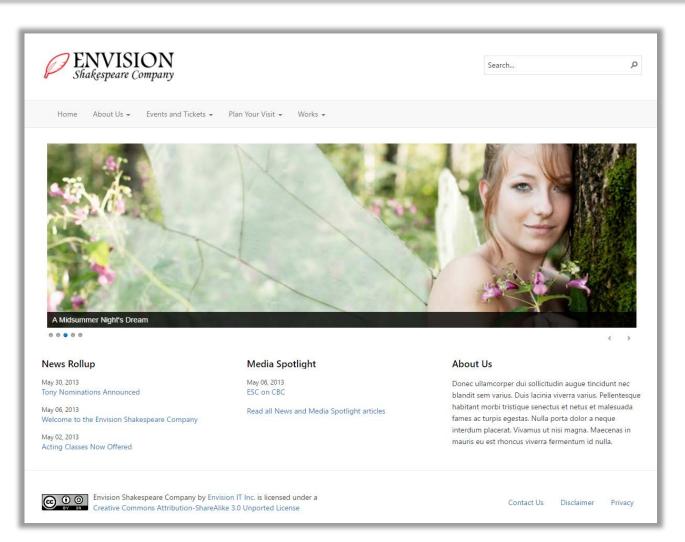

SharePoint APIs

- Client Side Object Model (CSOM)
- REST APIs
- REST seems to be the preferred path that Microsoft is investing in

Shakespeare Reference Project

Pentecostal Assembly of Canada Pension Portal

- SharePoint 2013 portal for current and retired staff
- Address and Banking Information update forms
 - Write to SharePoint lists
 - List columns define the form fields
 - Workflow used to secure submissions
 - Built with jQuery and SharePoint REST APIs
- Pension Calculator
 - Calculates annual benefits payable at retirement
 - Knockout model uses values entered by user

Elevated Permissions

- Code that needs to run in a different context than the user
- Can't run in JavaScript in the browser
- No code allowed on SharePoint server
- Need somewhere else to run

Visual Studio WebAPI Projects

- Part of ASP.NET 4.5
- Full .NET functionality typically C#
- Can deploy on premises or in Azure
- Can cheat and deploy to SharePoint WFEs
- Makes authentication easier
- Some work to move to another environment

WebAPI Authentication

- Can be anonymous
 - Very useful for anonymous form submits
 - Simplifies permissions in SharePoint
- Leverage SharePoint or Windows authentication
 - Deploy as an IIS application under SharePoint, or on an internal IIS server
 - Can access the user's SharePoint or Windows identity
 - Use that to access SharePoint, or can still run with elevated permissions
- Leverage Windows authentication
 - Deploy as an IIS application on an internal IIS server
 - Can access the user's Windows identity
- Azure Active Directory
 - Ideal for Office 365
 - Register your API as an Azure App
 - Call from Office 365 and have access to the user identity

Milton District High School

- www.mdhsreads.ca
- Technological Resources Calendar
- Teachers can request resources
- Form is anonymously available
- Teachers confirm requests through an email link
- SharePoint library has approvals turned on
- Librarian approves to publish to site
- Mobile friendly

College of Early Childhood Educators

- Launched a new mobile-friendly SharePoint 2013 site
- Complain and Mandatory Employer Report forms next
- Anonymously submitted to a Visual Studio REST API
- Document attachments
- Creates a document set with metadata set from the form
- Generates a Word version of the report
- Uploads all attached documents

Envision IT Leave Request

- Vacation, sick days, bereavement, jury duty, etc.
- Tracks the allocation and accrual period
- Leverages AD Manager property
- Enforces security
 - Users don't have direct access to SharePoint lists
 - Permissions are managed in the REST API
 - Users can see their requests
 - Managers can see their reports
 - HR Administrators can see all requests
- Supports Office 365

County of Simcoe

- Derived from Envision IT Leave Request
- On premises SharePoint 2013
- Integrated with SAP HRIS
- REST API
 - Allocations from SAP
 - Manager reporting structure
 - Writing requests to SharePoint
 - Pushing approved requests back into SAP
- Nintex workflow
 - Drives the approval process

2013

\rightarrow

Internal

Internal initiative in Microsoft to start collecting learnings from add-in model

2014

Going public

Going first public in CodePlex, then moved to GitHub. Concentration on addin model enterprise scenarios.

2015

Reusability

PnP Provisioning Engine introduced. Reusable components and solutions, like PnP Partner Pack introduced. Weekly webcasts started.

2016

Partnership

PnP ownership moved to engineering, team works with a partnership on aligning roadmap. Work with SP Framework starts.

PnP

More than 2000 tenants use

PnP Core Component in SharePoint Online. Numerous also on-prem.

More than 280 million

requests using PnP Core Component in September before 13th.

More than **150** samples to learn and take advantage from in your work

►xtranetUserManager

More than **11000** unique visitors during past 2 weeks in PnP repositories

More than **300** contributors in the GitHub for the PnP and SP repositories.
